

## Incubator Resources

USP General Chapter <797> Pharmaceutical Compounding — Sterile Preparations defines the minimum standards to be followed when preparing compounded sterile drugs (compounded sterile preparations or CSPs). Within these, compounding personnel are required to successfully complete media-fill tests and gloved fingertip and thumb sampling annually. While the manufacturers vary somewhat in how their products work, some require use of an incubator.

To assist, below is a list of incubator suppliers. This list is not intended to be comprehensive nor does the American Academy of Otolaryngic Allergy (AAOA) recommend or endorse any specific company, manufacturer, or product. This list is intended solely for informational purposes.
