

CY 2022 Physician Fee Schedule Proposed Rule Summary

On July 13, the Centers for Medicare & Medicaid Services (CMS) released the Medicare Physician Fee Schedule (MPFS) proposed rule for CY 2022. This rule updates payment policies and payment rates for Part B services furnished under the MPFS, as well as makes changes to the Quality Payment Program (QPP). The rule in its entirety and the addenda, including Addendum B, which lists the proposed RVUs for each CPT code can be found [here](#).

The following summarizes the major policies in the proposal. Note that the page numbers listed in this document refer to the display copy of the proposed rule.

Conversion Factor and Specialty Impact (p. 1177)

The proposed conversion factor for 2022 is \$33.5848, a decrease of \$1.31 from the 2021 conversion factor of \$34.8931, a decrease of 3.75 percent. This reduction is the result of the expiration of the 3.75 percent increase Congress included in the Consolidated Appropriations Act, 2021 as well as the fact there is no statutory increase to the conversion factor for 2022. Table 123 provides a summary of the impact of the changes, excluding the conversion factor decrease, in the proposed rule by specialty. The changes in the rule are budget-neutral in the aggregate, which explains why the impact for all physicians is shown as zero.

Based on an analysis conducted by the American Medical Association, the proposed changes in the rule, including the conversion factor decrease, would result in -3.5 percent and -4.9 percent decreases for allergy/immunology and otolaryngology respectively. Note that the changes to practice expense covered in this summary result in significant decreases for some procedures commonly performed by AAOA members. The overall impact of this proposed rule on an individual provider's reimbursement will depend upon their case mix.

Practice Expense Clinical Labor Pricing Update (p. 48)

CMS began updating supply and equipment prices used for direct practice expense (PE) inputs in 2019 and 2022 will be the final year of the transition to these new inputs based on work StrategyGen's market research study. When this work started, the agency did not propose to update the clinical labor pricing which has remained unchanged since CY 2002. Stakeholders have suggested certain wage rates are inadequate because they do not reflect current wage information and updating supply and equipment pricing without updating clinical labor could create distortions in direct PE allocation in a budget neutral system.

In this rule, CMS is proposing to update the clinical labor pricing using the most current Bureau of Labor Statistics (BLS) data in CY 2022 in conjunction with the final year of the supply and equipment pricing update. Table 5 includes the proposed clinical labor pricing updates. The agency is requesting comments on this proposal and is particularly interested in additional wage data for clinical labor types for which there was no direct Bureau of Labor Statistics wage data. Table 6 shows the impact of this proposed change by specialty. CMS estimated the specialty-specific impacts of this change as well as those if the policy were to be phased in over four years (which can be found in Table 135) with allergy/immunology seeing a -1 percent decrease and otolaryngology seeing a -2 percent decrease in reimbursement as a result if implemented all at once and no impact if it is phased in over four years.

These specialty impacts are largely driven by the share that labor costs represent of the direct PE inputs for each specialty such that specialties with substantially higher or lower than average share of direct costs attributable labor will experience the most significant changes. CMS is considering a 4-year transition to implement the clinical labor pricing update to smooth out the increases and decreases but recognizes this would mean the agency will continue to rely on outdated data for clinical labor pricing.

Telehealth and Other Services Involving Communications Technology, and Interim Final Rule with Comment Period for Coding and Payment of Virtual Check-in Services-- Payment for Medicare Telehealth Services Under Section 1834(m) of the Act (p. 78) Revised Timeframe for Consideration of Services Added to the Telehealth List on a Temporary Basis (p. 90)

CMS is considering adding additional services to the Medicare telehealth services list using Category 3 which was established in rulemaking last year to add services on a temporary basis following the end of the COVID-19 public health emergency. These are services likely to have a clinical benefit when furnished via telehealth, but there is not yet sufficient evidence for the agency to consider adding them to the telehealth list on a permanent basis. The agency is proposing to revise the timeframe for services added to the list on a temporary basis and allow them to remain until the end of CY 2023 as this will allow for more time to collect utilization data and provide stakeholders with time to have them considered for permanent addition to the telehealth list under the agency's regular process.

The agency includes a separate list of services added to the telehealth list on an interim basis in response to the COVID-19 public health emergency, but not on a Category 3 basis (Table 11); these services will be removed when the public health emergency expires and include hospital inpatient services (CPT codes 99221-3), observation care services (CPT codes 99218-20, 99234-6), and telephone visit services (CPT codes 99441-3).

Implementation of Provisions of the Consolidated Appropriations Act, 2021 (p. 100)

The Consolidated Appropriations Act, 2020 ("the Act") included a provision to broaden the scope of services for which the telehealth originating site and geographic restrictions will not apply-- services furnished for the purpose of diagnosis, evaluation, or treatment of a mental health disorder—effective at the conclusion of the COVID-19 public health emergency. The Act does require the provider to see the patient in-person within 6 months or delivering these services via telehealth to the patient. For patients being treated or diagnosed with a substance use disorder or co-occurring mental health disorder, this in-person requirement does not apply.

Payment for Medicare Telehealth Services Furnished Using Audio-Only Communication Technology (p. 107)

CMS remains concerned that the use of audio-only communication for Medicare telehealth services could lead to inappropriate overutilization outside of the public health emergency and believes video visualization of the patient generally is necessary to fulfill the full scope of service elements of the codes included on the Medicare telehealth list. The agency is reassessing this position given the utilization of these services during the public health emergency; they observed audio-only E/M visits have been some of the most commonly performed telehealth services and most beneficiaries receiving these services were being treated for a mental health condition. Given the shortage of mental health professionals and limited broadband access in some areas, the agency will allow mental health services to be delivered to established patients using the audio-only modality when the originating site is their home. The Act

removed the geographic restriction for Medicare telehealth services for the diagnosis, evaluation, or treatment of a mental health disorder and adds the patient's home as a permissible originating site for these services, making this possible. The agency is proposing to adopt a similar ongoing requirement that an in-person item or service must be furnished within 6 months of such a mental health telehealth service and is limiting the use of audio-only to services delivered by practitioners who have the capacity to furnish two-way, audio/video telehealth services but are providing the mental health services via audio-only communication technology in an instance where the beneficiary is unable to use, does not wish to use, or does not have access to two-way, audio/video technology. The agency is creating a service-level modifier to identify these services to monitor utilization and address program integrity concerns.

Other Non-Face-to-Face Services Involving Communications Technology under the PFS Expiration of PHE Flexibilities for Direct Supervision Requirements (p. 112)

CMS is soliciting information on whether the public health emergency-related flexibilities related to direct supervision should be made permanent by revising the definition of "direct supervision" to include immediate availability through the virtual presence of the supervising physician or practitioner using real-time, interactive audio/video communications technology without limitation. Specifically, the agency seeks comment on the extent to which the flexibility to meet the immediate availability requirement for direct supervision through the use of real-time, audio/video technology is being used during the public health emergency, and whether physicians and practitioners anticipate relying on this flexibility after the public health emergency concludes. CMS also seeks comment on the possibility of permanently allowing immediate availability for direct supervision through virtual presence using real-time audio/video technology for only a subset of services, as it may be inappropriate to allow direct supervision without physical presence for some services, due to potential concerns over patient safety.

Virtual Check-in – G2252

In the CY 2021 rule, CMS adopted a longer virtual check-in HCPCS code G2252 (Brief communication technology-based service, e.g., virtual check-in service, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 11–20 minutes of medical discussion) on a temporary basis. The agency is proposing to permanently adopt this code and payment based on the support it has received.

Principal Care Management and Chronic Care Management (CPT codes 99490, 99439, 99491, 99X21, 99487, 99489, 99X22, 99X23, 99X24, and 99X25) (p. 196)

For CY 2022, the RUC resurveyed the CCM code family, including Complex Chronic Care Management (CCCM) and Principal Care Management (PCM), and added five new CPT codes: 99X21 (Chronic care management services each additional 30 minutes by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)), 99X22 (Principal care management services for a single high-risk disease first 30 minutes provided personally by a physician or other qualified health care professional, per calendar month), 99X23 (Principal care management services for a single high-risk disease each additional 30 minutes provided personally by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)), 99X24 (Principal care management services, for a single high-risk disease first 30 minutes of clinical staff time directed by physician or other qualified health care professional, per calendar month), and 99X25 (Principal care management services, for a single high-risk disease each

additional 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)).

The CCM/CCCM/PCM code family now includes five sets of codes, each set with a base code and an add-on code. The sets vary by the degree of complexity of care (that is, CCM, CCCM, or PCM), who furnishes the care (that is, clinical staff or the physician or NPP), and the time allocated for the services. CMS is proposing to accept the work and PE values as recommended by the RUC as outlined in Table 12.

CMS is also interested in understanding the process employed to get beneficiary consent for these services and asks for comment on this issue, specifically on what levels of supervision are necessary to obtain beneficiary consent when furnishing CCM services and will consider such comments in future rulemaking.

Evaluation and Management (E/M) Visits (p. 241)

CMS is continuing to refine its existing E/M policies and is proposing policies regarding split (or shared) visits, critical care services, and teaching physician visits.

Split (or Shared) Visits (p. 241)

A split (or shared) visit refers to an E/M visit that is performed (“split” or “shared”) by both a physician and a NPP who are in the same group. CMS needs to address whether and when a physician can bill for these visits because they are reimbursed at a higher rate than an NPP. In the office, physicians can bill for these services when the NPP’s services are “incident to” the physician’s professional services; however, the “incident to” rules do not apply in the facility setting. The agency sees the changes in the rule as distinguishing between split (or shared) visits and those services furnished incident to the professional services of a physician.

CMS is proposing the following changes:

- *Definition of split (or shared) visits:* In the facility setting, a split (or shared) visit is one performed in part by both a physician and a NPP who are the same group where “incident to” billing is prohibited and is furnished in accordance with applicable law and regulation, including conditions of coverage and payment, such that the E/M visit could be billed by either the physician or the NPP if it were furnished independently by only one of them in the facility setting.
- Physicians and NPPS can bill split (or shared) visits for both new and established patients and for critical care and certain SNF/NF E/M visits.
- *Definition of “substantive portion”:* Only the physician or NPP who performs the substantive portion of the visit would bill for it, so the agency proposes “substantive portion” to mean more than half of the total time spent by the physician and NPP performing the visit.
- *Distinct time:* The distinct time spent by each physician or NPP furnishing a split (or shared) visit would be summed to determine the total time and who provided the substantive portion.
- *Qualifying time:* CMS is proposing a listing of activities that could count toward total time for determining substantive portion (for services other than for critical care) including:
 - Preparing to see the patient (for example, review of tests).
 - Obtaining and/or reviewing separately obtained history.
 - Performing a medically appropriate examination and/or evaluation.
 - Counseling and educating the patient/family/caregiver.
 - Ordering medications, tests, or procedures.

- Referring and communicating with other health care professionals (when not separately reported).
- Documenting clinical information in the electronic or other health record.
- Independently interpreting results (not separately reported) and communicating results to the patient/ family/caregiver.
- Care coordination (not separately reported).
- CMS is proposing to revise its policy to allow a practitioner to for a prolonged E/M as a split (or shared) visit.
- The agency proposes the two individual practitioners who performed the visit must be documented in the medical record and the individual who performed the substantive portion would be required to sign and date the medical record.
- The agency is proposing to create a modifier to be billed with these visits to identify the visits as split (or shared) visits.

Critical Care Services (CPT codes 99291-99292) (p. 254)

CMS includes proposals regarding critical care services and proposes to adopt the CPT prefatory language as the definition of critical care services: critical care is the direct delivery by a physician(s) or other qualified health professional of medical care for a critically ill/injured patient in which there is acute impairment of one or more vital organ systems, such that there is a probability of imminent or life-threatening deterioration of the patient's condition. The visit involves high complexity decision-making to treat single or multiple vital organ system failure and/or to prevent life-threatening deterioration of the patient's condition.

The agency also proposes to adopt CPT's listing of bundled services that are part of critical care visits to improve transparency and clarity of our policy for this service: interpretation of cardiac output measurements (93561, 93562), chest X rays (71045, 71046), pulse oximetry (94760, 94761, 94762), blood gases, and collection and interpretation of physiologic data (for example, ECGs, blood pressures, hematologic data); gastric intubation (43752, 43753); temporary transcutaneous pacing (92953); ventilator management (94002-94004, 94660, 94662); and vascular access procedures. Any of the bundled services will not be separately billable when the practitioner is delivering a critical case service to a patient.

- Critical Care by a Single Physician or NPP: CMS proposes to adopt the CPT convention for critical care services furnished by a single physician or NPP: CPT code 99291 is used to report the first 30-74 minutes of critical care on a given date, and that the code should be used only once per date even if the time spent by the practitioner is not continuous on that date.
- Critical Care Services Furnished Concurrently by Different Specialties: CMS is proposing that concurrent care occurs where more than physician or qualified NPP furnishes services to the same patient on the same day and can be covered when the services of each practitioner are medically necessary, and not duplicative.
- Critical Care Furnished Concurrently by Practitioners in the Same Specialty and Same Group (Follow-Up Care): CMS is proposing that the provider delivering the follow-up or subsequent care would report their time using CPT code 99292 for subsequent time intervals rather than CPT code 99291 the primary service code. However, should the initial practitioner not meet the time requirement to bill CPT code 99291 for initial care and another the practitioner in the same group and specialty who delivers critical care to the same patient on the same day, CMS

proposes the time could be aggregated to meet the time requirement to bill for CPT code 99291.

- Split (or Shared) Critical Care Services: Currently, critical care services cannot be billed as split (or shared) services, but CMS is proposing to reverse this policy in recognition of the growth of team-based care. Therefore, the agency is proposing the practitioner who furnishes the substantive portion of the cumulative critical care time would report the service for the care delivered to a patient by a physician and NPP on a given calendar date.
- Critical Care Visits and Same-Day Emergency Department, Inpatient, or Office/Outpatient Visits: CMS is proposing no other E/M visits can be billed for the same patient on the same day as the critical care services when the services are furnished by the same practitioner, or by practitioners in the same specialty in the same group. Thus, CMS is seeking comment on this proposal to better understand clinical practice for critical care, whether and how CMS could pay for E/M services furnished on the same date as critical care services when provided by the same practitioner, or practitioners in the same specialty within a group, while also reducing the potential for duplicative payment.
- Critical Care Visits and Global Surgery: The agency is proposing to bundle critical care visits with global surgical services.
- Documentation Requirements: CMS is proposing to require practitioners to document the total time that critical care services were provided by each reporting practitioner in the medical record as well as the services were medically reasonable and necessary.

Payment for the Services of Teaching Physicians (p. 268)

CMS policy states teaching physicians can bill for services only if they are present for the key or critical portion of the service if a resident participates in a teaching setting. Payment can also be provided if a teaching physician has a “virtual presence” for services delivered in training sites outside of metropolitan statistical areas. In this rule, CMS is proposing only the time a teaching physician was present can be included when total time is used to determine the outpatient E/M visit level.

Under the primary care exception, the agency is proposing only medical decision-making (MDM) can be used to select outpatient E/M visit level. Thus, CMS is seeking comment on this proposal, including on the assumption that MDM is a more accurate indicator of the appropriate level of the visit relative to time in the context of the primary care exception for services furnished by residents and billed by teaching physicians in primary care centers. CMS is also seeking comment on whether time is an accurate indicator of the complexity of the visit and how teaching physicians might select office/outpatient E/M visit level using time when directing the care of a patient that is being furnished by a resident in the context of the primary care exception.

Physician Self-Referral Updates (p. 611)

In December 2020, CMS published the Modernizing and Clarifying the Physician Self-Referral Regulations final rule. This rule established and revised a number of exceptions to the physician self-referral law. This final rule also revised several definitions for fundamental terminology related to the law, including the definition of an “indirect compensation arrangement.” To align with this final rule and concerns that have been expressed by stakeholders, CMS is proposing to revise the regulation that sets forth the conditions for “indirect compensation arrangements.” Under this revision, an unbroken chain of financial relationships between a physician and an entity would be an indirect compensation arrangement for purposes of the physician self-referral law if the unit of compensation received by the physician (or immediate family member) is payment for anything other than services personally

performed by the physician (or immediate family member). This would include an arrangement for the rental of office space or equipment.

Quality Payment Program Provisions

MIPS Eligible Clinician (p. 710)

In response to stakeholder feedback, CMS proposes to revise the definition of a MIPS eligible clinician to include clinical social workers and certified nurse mid-wives. CMS also proposes to automatically reweight the promoting interoperability performance category to zero percent for clinical social workers.

MIPS Value Pathways (p. 716)

In CY 2020, CMS introduced the MIPS Value Pathway (MVP) framework, intended to replace the current MIPS. CMS continues to believe that transitioning to MVPs will improve value, reduce burden, inform patient choice in selecting clinicians, and reduce barriers to facilitate movement alternative payment models (APMs). CMS is focused on the following guiding principles to introduce and implement MVPs:

1. MVPs should consist of limited, connected complementary sets of measures and activities that are meaningful to clinicians. This will reduce clinician burden, align scoring, and lead to sufficient comparative data.
2. MVPs should include measures and activities that result in providing comparative performance data, which is valuable to patients and caregivers in evaluating clinician performance and making choices about their care. MVPs will enhance this comparative performance data as they allow subgroup reporting that comprehensively reflects the services provided by multispecialty groups.
3. MVPs should include measures selected using the Meaningful Measures approach and, wherever possible, the patient voice must be included, to encourage performance improvements in high priority areas.
4. MVPs should reduce barriers to APM participation by including measures that are part of APMs where feasible, and by linking cost and quality measurement.
5. MVPs should support the transition to digital quality measures

MVP Development Criteria (p. 763)

In last year's final rule, CMS established a specific set of criteria to be used in the development and selection of MVPs. In this proposed rule, CMS is proposing the following additions to the MVP development criteria beginning with the CY 2022 performance year:

- MVPs must include at least one outcome measure that is relevant to the MVP topic.
- Each MVP that is applicable to more than one clinician specialty should include at least one outcome measure that is relevant to each clinician specialty included.
- In instances when outcome measures are not available, each MVP must include at least one high priority measure that is relevant to the MVP topic.
- Allow the inclusion of outcomes-based administrative claims measures within the quality component of an MVP.
- Each MVP must include at least one high priority measure that is relevant to each clinician specialty included.
- To be included in an MVP, a qualified clinical data registry (QCDR) measure must be fully tested.

MVP Implementation Timeline (p. 729)

In the CY 2021 final rule, CMS delayed the implementation of the MVPs until the CY 2022 performance period, due to the COVID-19 pandemic. In this proposed rule, CMS is continuing to move forward with the development of MVPs and proposes to delay the transition to MVPs to the CY 2023 performance year. CMS is proposing the following MVP implementation timeline:

- CY 2023 performance period – the initial set of MVPs will be available for reporting and that reporting is voluntary.
- CY 2024-2027 performance periods – the MVP portfolio will be updated to include new MVPs that are available for reporting and MVP reporting is still voluntary.
- The end of the CY 2027 performance period – CMS will sunset traditional MIPS.
- CY 2028 performance period and subsequent years – CMS will require mandatory MVP reporting.

CMS seeks feedback on this proposed timeline. CMS also requests comments on the factors they should monitor and use to determine stakeholder readiness to sunset traditional MIPS and fully transition to MVPs.

Defining the Term “MVP Participant” (Page 727)

For the CY 2023 and CY 2024 performance periods, CMS is proposing to define the term “MVP Participant” to mean: an individual MIPS eligible clinician, multispecialty group, single specialty group, subgroup (which will be defined separately), or APM Entity. For the CY 2025 performance period and all future years, CMS proposes “MVP Participant” to mean: an individual MIPS eligible clinician, single specialty group, subgroup, or APM Entity. This change would account for CMS’ proposal for multispecialty groups to be required to report as subgroups beginning with the CY 2025 performance period.

Subgroups (p. 744)

CMS is proposing to establish subgroup reporting. The agency proposes the following definition for subgroups: “A subset of a group which contains at least one MIPS eligible clinician and is identified by a combination of the group Taxpayer Identification Number (TIN), the subgroup identifier, and each eligible clinician’s National Provider Identifier (NPI).”

To participate as a subgroup, each subgroup would be required to:

- Identify the MVP the subgroup will report;
- Identify one population health measure included in the MVP, and if applicable, any outcomes-based administrative claims measure on which the subgroup intends to be scored, if available;
- Identify the clinicians in the subgroup by TIN and NPI; and
- Provide a plain language name for the subgroup for purposes of public reporting.

CMS seeks comment on how subgroups should be structured, assessed, and scored in the future as the implementation of MVPs continue.

MVP Participant Registration (p. 784)

CMS proposes that an MVP Participant would be required to register for the MVP between April 1 and November 30 of the current performance year. Therefore, to be eligible for the CY 2023 performance period, a participant must register by November 20, 2023. Further, at the time of registration, CMS proposes that the MVP participant must select (1) the MVP they intend to report, (2) one population health measure, and (3) any outcomes-based administrative claims measure on which the MVP Participant intends to be scored, if available within the MVP.

Proposed MVPs (p. 774)

CMS plans to gradually implement MVPs for specialties and subspecialties that participate in the MVP program. For the CY 2023 performance year, CMS is proposing to implement the following MVPs:

1. Rheumatology
2. Stroke Care and Prevention
3. Heart Disease
4. Chronic Disease Management
5. Emergency Medicine
6. Lower Extremity Joint Repair
7. Anesthesia

Each proposed MVP includes a specific set of measures and activities from the quality performance category, improvement activities performance category, and the cost performance category. CMS also includes a “foundational layer” of measures which includes population health measures and promoting interoperability performance category measures. Beginning on Page 1721 of the proposed rule, CMS defines the seven proposed MVPs in more detail.

Proposed MVP Reporting Requirements (p. 783)

CMS proposes the following MVP reporting requirements for all MVP participants for the four MIPS performance categories:

- Quality Performance Category – An MVP Participant selects four quality measures, and one must be an outcome measure (or a high priority measure if an outcome is not available or applicable).
- Improvement Activities Performance Category – The MVP Participant must select:
 - Two medium weighted improvement activities; or
 - One high weighted improvement activity; or
 - Participates in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice.
- Cost Performance Category – An MVP Participant is scored on the cost measures that are included in the MVP that they select and report.
- Foundational Layer
 - Population Health Measures – An MVP Participant selects one population health measure, at the time of MVP registration, to be scored on.
 - Promoting Interoperability (PI) Performance Category – An MVP Participant is required to meet the Promoting Interoperability performance category requirements.

CMS is proposing to align the MVP scoring policies with those used in traditional MIPS. CMS also proposes to provide comparative performance feedback within the annual performance feedback to show the performance of similar clinicians who report on the same MVP.

Health Equity Measures in MVPs – Request for Information (p. 772)

CMS aims to close the health equity gap in the agency’s clinician quality programs. CMS believes there is value in including quality measures that capture health equity in each MVP and they intend to prioritize the development of health equity measures through future cycles of measure development. As such, CMS requests feedback on the following:

- Should health equity measures be developed in a manner to be broadly applicable to the various specialties and subspecialties that participate in MIPS?

- Is there value in the development of more specialty specific health equity measures?
- Considering MIPS and MVPs includes several specialties and subspecialties, what factors should be considered when developing a health equity measure?
- Should CMS include a health equity measure in the foundational layer of all MVPs, as a required measure, in the future? If not, why not?

[MIPS Cost Performance Category Updates \(p. 841\)](#)

CMS proposes several updates to the cost performance category, including five new episode-based cost measures for melanoma resection, colon and rectal resection, sepsis, diabetes, and asthma/COPD. Each of these new episode-based measures will have a 20-case minimum, with the exception of melanoma resection, which has a 10-case minimum. CMS is also seeking comment on the process of cost measure development, including comment on measurement prioritization, priority areas for future episode-based measurement development, standards for measure construction and measure component, and the challenges that stakeholders encounter in development of cost measures. Additionally, CMS proposes to assign a zero percent weight to the cost performance category for 2020 PY/CY2022 payment year due to the ongoing public health emergency. CMS is seeking comment on additional circumstances that would limit the ability to calculate cost measure scores to inform decision-making on cost re-weighting in the future.

[MIPS Promoting Interoperability Performance Category \(p. 887\)](#)

CMS proposes several revisions to reporting requirements, including revising requirements for the public health and clinical data exchange objective; add a requirement that patient have access to their health information indefinitely for encounters on or after January 1, 2016; require MIPS eligible clinicians to attest to conducting an annual assessment of SAFER Guides beginning in the CY 2022 performance period; and modifying the prevention of information blocking attestation statements to distinguish the attestation from separate requirements under the Office of the National Coordinator for Health Information Technology.

[MIPS Quality Performance Category Updates \(p. 943\)](#)

CMS proposes to remove end-to-end electronic reporting and the high-priority measure bonus points as well as the 3-point floor for scoring measures. CMS also proposes to use alternative period benchmarks, such as calendar year 2019 for scoring quality measures in the 2022 performance period, pending analysis of the 2020 performance period data. CMS also proposes to extend the CMS Web Interface as a quality reporting option for registered groups, virtual groups, or other APM entities for the 2022 performance period.

[Performance Category Weights \(p. 988\)](#)

The 2022 performance year/2024 payment year performance weights, specified in statute and codified in the 2022 PFS, are:

- 30% for the quality performance category;
- 30% for the cost performance category;
- 15% for the improvement activities performance category;
- 25% for the promoting interoperability category.

Request for Information: Utilization Data (p. 1049)

CMS is seeking information on how CMS could make Public Use File utilization data published in the Provider Data Catalog more useful or accessible to patients, to inform the ways in which utilization data may be useful to patients and caregivers for their healthcare decisions.

Advanced Alternative Payment Models for 2022 QP Performance Period (p. 1227)

CMS expects the following APMs to be Advanced APMs for the 2022 QP Performance Period:

- Bundled Payments for Care Improvement Advanced Model;
- Comprehensive Care for Joint Replacement Payment Model (CEHRT Track);
- Global and Professional Direct Contracting Model;
- Kidney Care Choices Model (Kidney Care First; Professional Option and Global Option);
- Maryland Total Cost of Care Model (Care Redesign Program; Maryland Primary Care Program);
- Medicare Shared Savings Program (Basic Track Level E, and the ENHANCED Track);
- Oncology Care Model (Two-Sided Risk Arrangements);
- Primary Care First (PCF) Model;
- Radiation Oncology model; and,
- Vermont All-Payer ACO Model (Vermont Medicare ACO Initiative).

MIPS Improvement Activities Performance Category (p. 1695)

CMS proposes to add 7 new improvement activities, modify 15 improvement activities, and remove 6 previously adopted improvement activities:

New Activities	<ul style="list-style-type: none">- Create and implement an anti-racism plan- Implement food insecurity and nutrition risk identification and treatment protocols- Implementation of a trauma-informed care approach to clinical practice- Promoting clinician well-being- Implementation of a personal protective equipment plan- Implementation of a laboratory preparedness plan- Application of CDC's training for healthcare providers on Lyme disease
Revised Activities	<ul style="list-style-type: none">- Engagement of new Medicaid patients and follow-up- MIPS eligible clinician leadership in clinical trials or community-based participatory research- Use of certified HER to capture patient reported outcomes- Collection of and follow-up on patient experience and satisfaction data on beneficiary engagement- Evidence-based techniques to promote self-management into usual care- Drug cost transparency- Practice improvements that engage community resources to support patient health goals- Perioperative surgical home care coordination- Provide 24/7 access to MIPS eligible clinicians/groups who have real-time access to patient's medical records- Use of telehealth services that expand practice access- Use of toolsets or other resources to close health care disparities across communities- Regular review practices in place on targeted patient population needs- Consultation of the prescription drug monitoring program- Measurement and improvement at the practice and panel level

	- COVID-19 clinical data reporting with or without clinical trial
Removed Activities	<ul style="list-style-type: none">- Regularly assess the patient experience of care through surveys, advisory councils and/or other mechanisms- Participation in CAHPS or other supplemental questionnaire- Use of tools to assist patient self-management- Provide peer-led support for self-management- Implementation of condition-specific chronic disease self-management support programs- Improved practices that disseminate appropriate self-management materials
